### ***Reasons for Allowance***

2. The following is an examiner's statement of reasons for allowance:

Art Unit: 1772

With regard to instant claims 47 and 54 the prior art fails to teach or suggest applicant's recited corrosion-resistant composite conduit comprising a first porous layer mineral containing substrate which covalently bonded to a second layer comprising a thermosetting material containing a surfactant, a silane, curing agent having isocyanate groups through said silane and said mineral, the second layer is covalently bonded to a third layer comprising a thermoplastic material said thermoplastic material impregnated with a reactive hydroxyl-bearing resin through said isocyanate groups and said reactive hydroxyl-bearing resin.

Bertram discloses a first porous layer mineral containing substrate bonded to a second layer comprising a thermosetting material containing a polyurethane agent having isocyanate groups, the second layer is bonded to a third layer comprising a thermoplastic material. Ranney discloses a silane in a polyurethane to improve bonding to various surfaces. However, neither reference discloses that the first, second and third layer are covalently bonded to each other, said thermoplastic material impregnated with a reactive hydroxyl-bearing resin and a surfactant.
